

Washington, D.C. 20520

April 10, 1984

**MEMORANDUM**

TO: INR/IS - Ms. Eileen B. Vanderburgh  
FROM: A/ISO - Ann L. Berna *all*  
SUBJECT: INR Information Handling System Software Support

This is to confirm our recent conversation concerning INR's Information Handling System (IHS) software support.

It is ISO's understanding that INR will phase its Computer Specialist, Jim Walker, into the software support area and to that end will provide required DEC PDP training for him. ISO will, over a three month time period beginning approximately July 1, 1984, (after his DEC PDP training is completed) train him in the particular software currently resident on the INR DEC PDP 11/70.

It is our further understanding that INR will provide any required funding for contractor support of the DEC PDP-resident IHS system and will act as COTR on any future contracted work. ISO will be glad to assist you by providing background information and the benefit of our experience in past dealings with the contractor. Because the profiling portion of the IHS system (resident on the IBM 3083) is fully integrated with the FAIS system, ISO will maintain software support for that portion of the system for the foreseeable future.

ISO supports INR's progress in assuming responsibility for software support for the DEC PDP-resident IHS system. Working together through the plan outlined above, INR should be self-sufficient in this area within six months. Be assured that ISO will remain available to assist you through this transition.

Please let me know if your understanding of this arrangement differs from that outlined above.
